

Ibrahim Kalam

Experienced **freelance web developer** with a background in Physics, I am proficient in various technologies, including HTML, CSS, JavaScript, React, Python, Redux, Figma and REST APIs. Skilled in debugging, optimizing code, and creating user-friendly interfaces to solve complex problems.

Project Manager Website

2023

- Created a project management business website for a client to create a strong online presence
- Fully responsive website available for all screen sizes
- Implemented interactive features with a modern design to reflect their brand values and services
- Wrote clean and easy-to-read code to ensure the website is easy to maintain and update in the future.

Audio Mixer Website

2022

- Created an interactive and colourful website showcasing client portfolio work as a freelance web designer.
- Implemented features such as interactivity and colour schemes using HTML, Sass, and JavaScript
- Incorporated feedback from the client throughout the development process

Employment History

Quality Assurance Manager

Legal Utopia

2021 - 2022

- Led and directed the quality assurance department, successfully implementing and maintaining the Legal Utopia quality management system.
- Actively managed a team which overlooked assets released by the company, duly ensuring work is completed to a high standard such that they align with brand identity.

Education

BSc Physics

University of Bath

- Developed a program to localize the source of electromagnetic waves within the brain from raw EEG scans as part of my final year project.
- Completed courses in advanced mathematics, quantum mechanics, and astrophysics.
